# COMMUNITY CENTER

© René Mouret, City of Gap

The community center in Charance is used by different persons and groups as a place for gatherings and events. It is a low-energy house that only consumes 2'191 kWh a year and produces its own heat by using solar energy. Its walls are 20 cm thick, the housetop 40 cm. Fresh and pleasantly tempered air is provided by comfort ventilation and a ground-coupled heat exchanger.
