<sup>1</sup>Department of Land, Environment, Agricolture and Forestry (TESAF) University of Padova (IT)

<sup>2</sup> ETIFOR, spin-off of the University of Padova (IT)

<sup>3</sup> Forest Stewardship Council (FSC)-Italia (IT)

## **Outline**

## The opportunities of ecosystem services certification: the case of forests

- 1. Introduction
- 2. Certification: basic concepts
- 3. Certification of forest ES
- 4. A best practice: FSC certification of ES
- 5. To conclude: potential and challenges

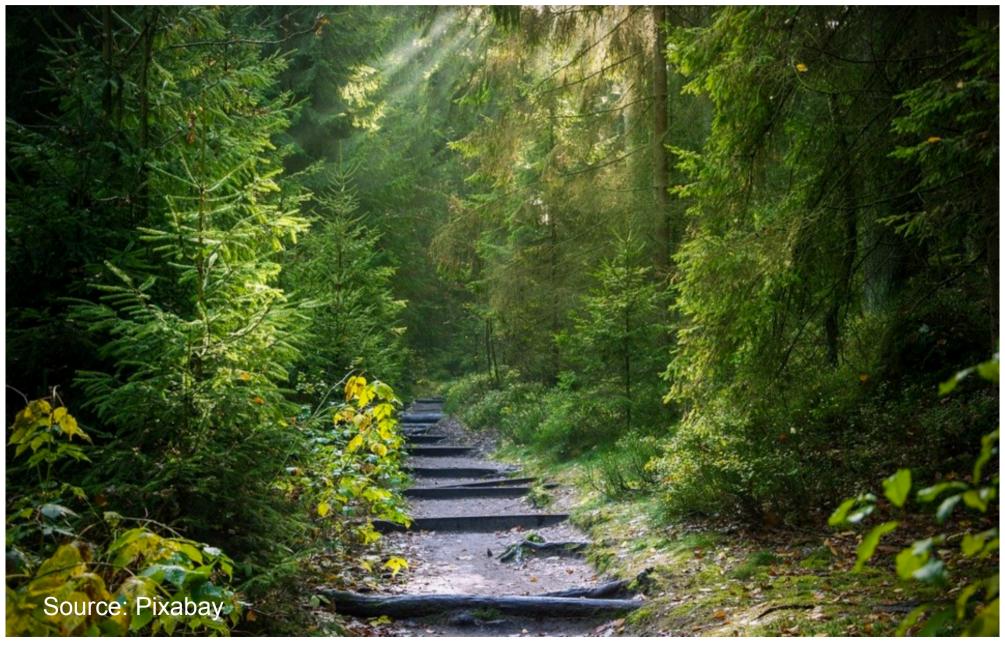

## Let's visit Alpine forests...

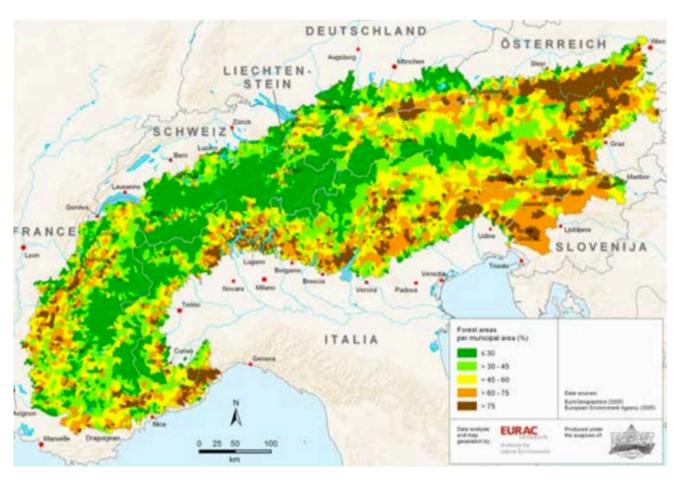

## 1. Introduction: forests in the Alps

• Forests cover ca. 8.8 M ha (46% of the Alpine Convention total area), it is increasing in recent years, ca. +0.5%/y

- covered by tree
  canopies cover
  >10% of the area
  and trees higher
  than 5 m (with
  some differences
  country by country)
  + shurb forest
- Marginal agricultural lands abandonment
- Reduction of economic profitability of forest management

## 1. Introduction: what forest ES are? CIPRA VIVERE ALPI

#### **Provisioning** services

Wood

Non Wood Products

Regulating services

Soil protection

**Biodiversity** 

Carbon sequestration

#### Cultural services

Recreation, Culture, Sport

Health, wellbeing

Landscape

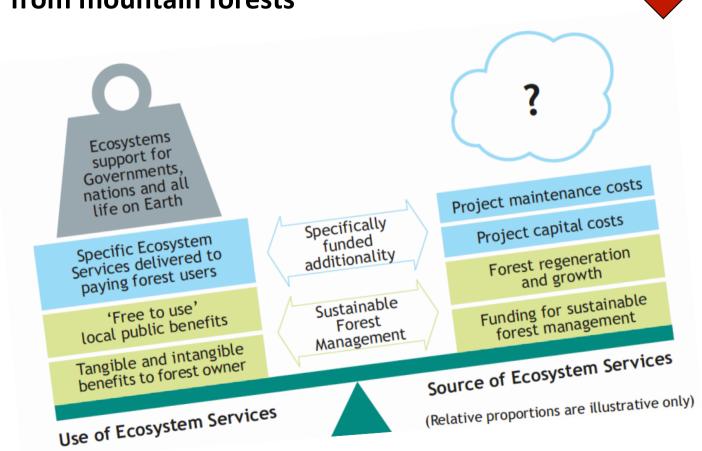

## 1. Introduction: what the problem is?

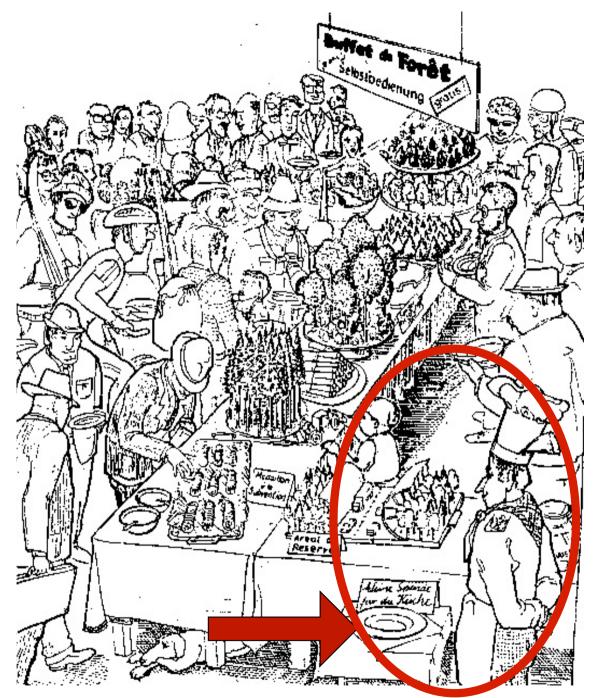

- Total value of regulating and recreational ES
- Commercial value of (traditional) provisioning ES from mountain forests

# 1. Introduction: what the problem is?

Forest buffet for free

### 2. Certification: definition

"The provision by an independent body of written assurance that the product, service or system in question meets specific requirements" (ISO, 2015)

- Standards (e.g. EU Regulation 2018/848 on organic production and labelling of organic products)
- Management (practices, tools, etc.)
- Procedures (auditing, certificate issuing, etc.)

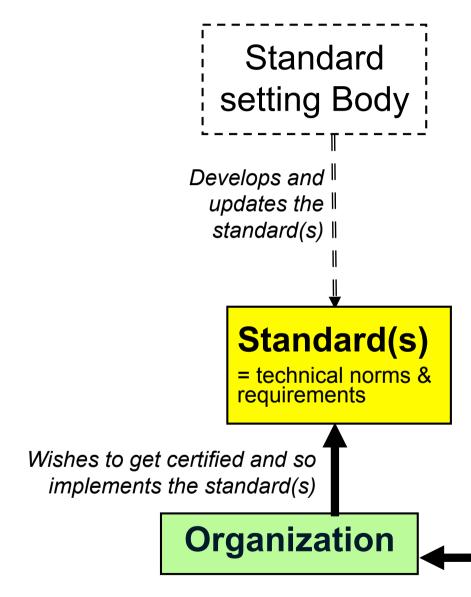

## 2. Certification: how does it work?

Accreditation Body

Checks the CB against accreditation standards and procedures

Accredited Certification Body (CB)

Checks the Organization against the standard(s)

issues the certificate and, in case, trademark use authorization

## 3. Certification of forest ES: why?

Certification is a <u>market-based instrument</u> that adds value to a product/service through labelling/marketing

Certified products/services are bought by consumers at higher prices, or as preferred

to non certified products

**Certified products/services** are provided by companies

at higher costs, as a tool to differentiate with respect to the competitors

Buyers of ES (market demand)

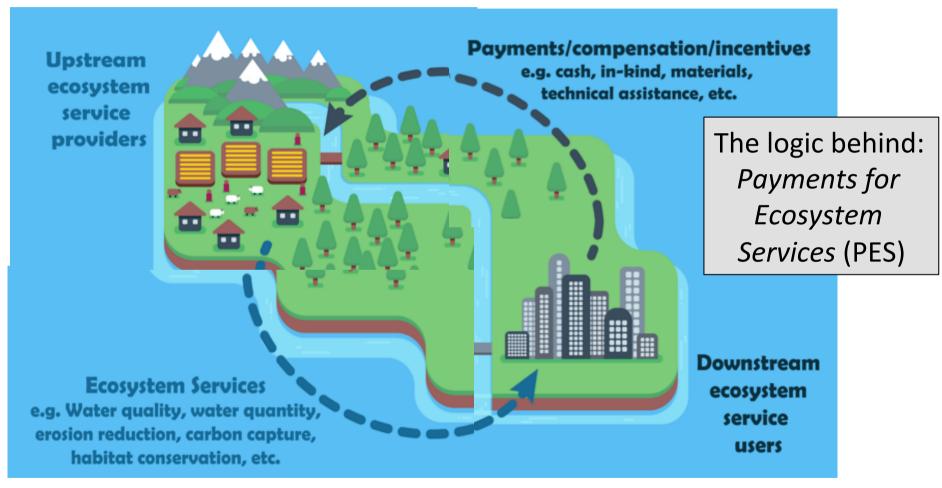

Providers of ES (market supply)

# 3. Certification of ES: provision (& payment) of ES at the basis of the mountainurban interface

Source: Boscolliso, Wikipedia - mod. [Accessed 24.06.2021]

https://upload.wikimedia.org/wikipedia/commons/2/2f/Payments\_for\_Ecosystem\_Services\_%28PES%29.png

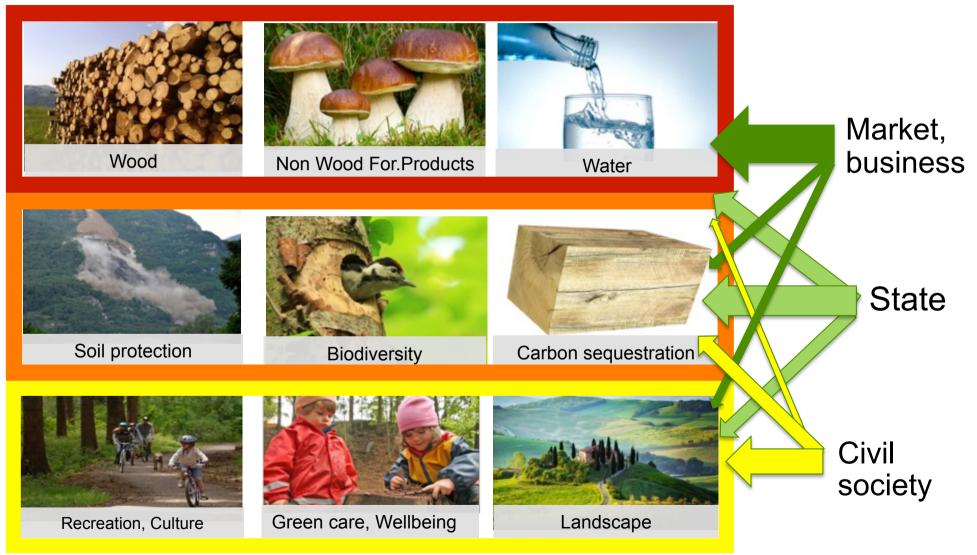

## 3. Certification of ES: who is interested?

## 3. Certification of forest ES: why?

- 1. Quantifying and valuing forest ES is important for taking more accurate and informed decisions:
- → positive and negative externalities → total value of a decision (e.g. cutting down a protective forest or building a new alpine ski area?)

1

2. Selling forest ES is important for collecting money to

remunerate (& motivate) the ES provider(s):

→ (higher) management costs compensated

→ real value of ES (partially) recognised

#### Certification can help in this, as it:

- independently demonstrates impacts of new/improved management practices on ES
- communicates commitments & results

### 3. Certification of forest ES

## Several examples of certified marketable products/services!

- timber/wood
- non wood forest products (berries, chestnuts, truffles, mushrooms, herbs, honey, ...)
- (CO<sub>2</sub> sequestration carbon credits)

#### **Examples:**

As deriving from Sustainable Forest Management according to

As wild collected

As deriving from organic production

As originating in a certain territory

As guaranteeing fair prices and trade

### 3. Certification of forest ES

# Several examples of certified marketable products/services!

- timber/wood
- non wood forest products
   (berries, chestnuts, truffles, mushrooms, herbs, honey, ...)
- (CO<sub>2</sub> sequestration carbon credits)

#### What about nonmarketable services?

- Biodiversity
- Soil erosion and hydrogeological protection
- Cultural/educational/ recreational services
- Landscape
- •

## CIPRA VIVERE NELLE ALPI

## The FSC® Ecosystem Services Procedure

FSC promotes
environmentally appropriate,
socially beneficial and
economically viable
management of the World's
forests

- FSC is widely known and recognized: demand oriented
- FSC recognizes the whole value of the forest (not only timber → Ecosystem Services Procedure)
- FSC verifies real impacts (not speculations)
- One world, one standard
- FSC has lower costs (competitive and consolidated system)

## The FSC® Ecosystem Services Procedure

The main goal is to give FSC-certified **forest managers/owners** the possibility to:

- Credibly verify,
   demonstrate and
   communicate the
   positive impacts of
   FSC-certified
   management activities on
   ES
- Improve access to emerging ES markets and finance

https://ic.fsc.org/en/document-center/id/328

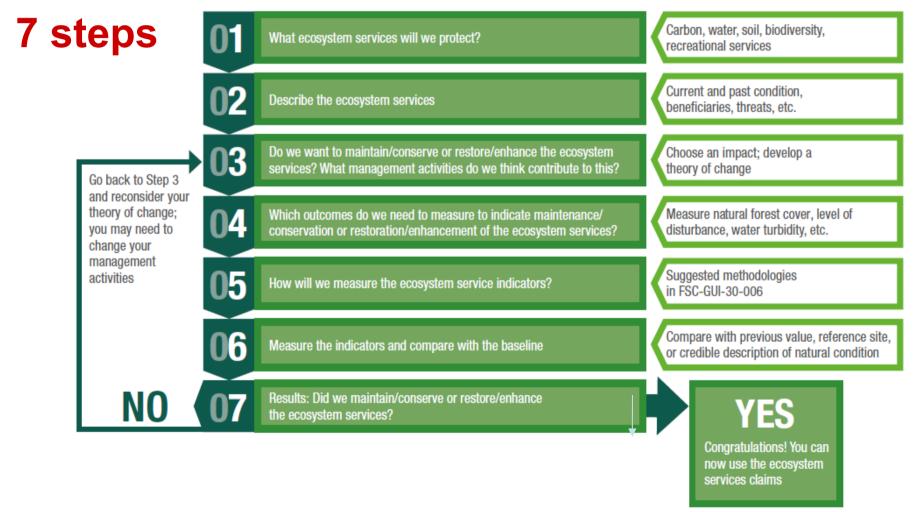

https://www.youtube.com/embed/k-0j6oyt1Us?autoplay=1&enablejsapi=1&origin=https%3A%2F%2Fic.fsc.org

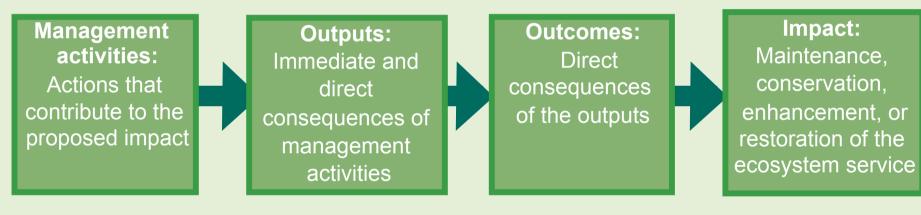

## The FSC® Ecosystem Services Procedure

Foundation: Theory-of-Change (cause-effect links)

Restoration/
Replanting of degraded forest areas with low forest cover

N. Hectares restored with indigenous (native) species

Increase natural forest cover Restoration of natural forest and its ES

1. Biodiversity conservation	4. Soil conservation
1.1 Restoration of natural forest cover	Maintenance of soil condition
1.2 Conservation of intact forest landscapes	Restoration/enhancement of soil condition
1.3 Maintenance of an ecologically sufficient conservation area network	Reduction of soil erosion through reforestation/ restoration
1.4 Conservation of natural forest characteristics	5. Recreational services
1.5 Restoration of natural forest characteristics	5.1 Maintenance/conservation of areas of importance for recreation and/or tourism
1.6: Conservation of species diversity	5.2 Restoration or enhancement of areas of importance for recreation and/or tourism
1.7: Restoration of species diversity	5.3 Maintenance/conservation of populations of species of interest for nature-based tourism
2. Carbon sequestration and storage	5.4 Restoration or enhancement of populations of species of interest for nature-based tourism
2.1 Conservation of forest carbon stocks (or reduced emissions)	
2.2 Restoration of forest carbon stocks	The FSC®

#### 3. Watershed services

- 3.1 Maintenance of water quality
- 3.2 Enhancement of water quality
- 3.3 Maintenance of the capacity of watersheds to purify and regulate water flow
- 3.4 Restoration of the capacity of watersheds to purify and regulate water flow

The FSC®
Ecosystem Services
covered by its
specific certification
procedure

## 4. A best practice: The FSC® Ecosystem Services procedure

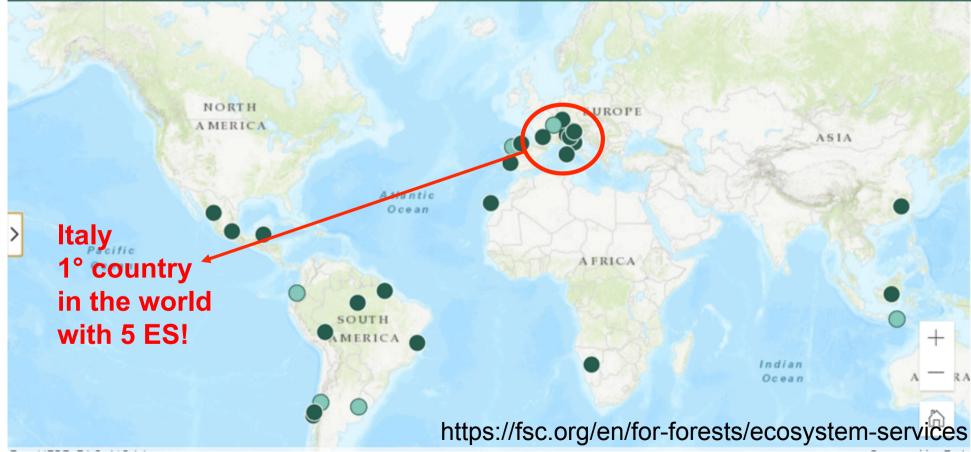

#### **Ecosystem Services Claims**

Overview

New vs. Existing Certificates

Filter Ecosystem Services Claims (per type)

30 sites adding to 803.159 ha of forest area with verified ecosystem service impacts, out of 2.347.728

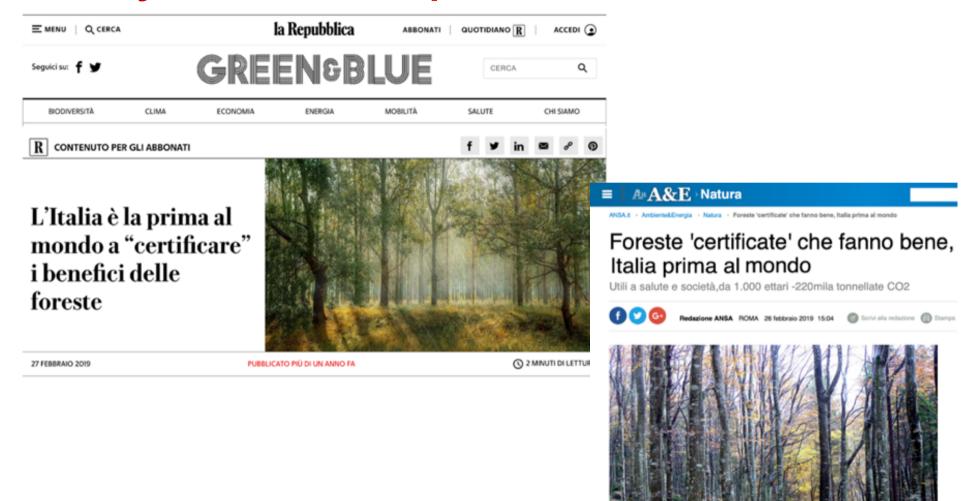

## 4. Italy as a pioneer country for the FSC® Ecosystem Services procedure

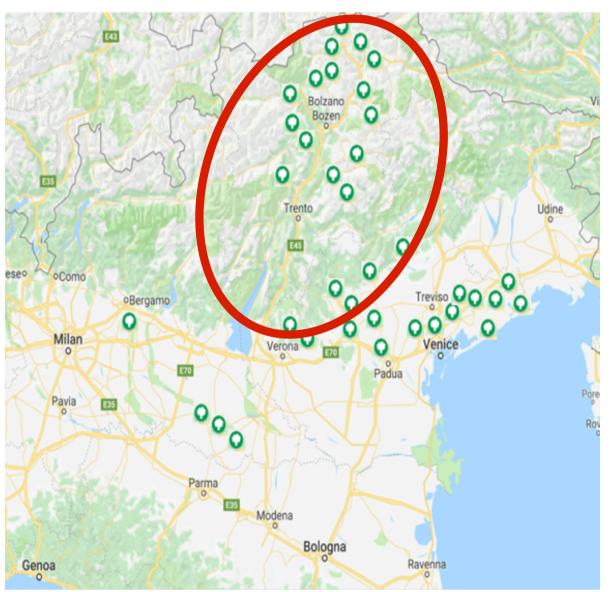

### 4. A best practice: FSC®-certified ES in the Alps

- More than 70 forests in Northern Italy
- More than 2,000 hectares
- Conservation forests & productive forests
- Public and private owners

2018: 1<sup>st</sup> certified in the world for the full set of 5 ES, several forest sites in the Alps

# 5. To conclude: potential and challenges

- Challenges: costs for new forest get certified. However, in any case, there are options for new value to certified forests.
- Certification as an opportunity to give value to green jobs, motivate
  active sustainable management of forest and landscape, attract
  investments (sponsors) in mountain areas
- Communications/claims, visibility → territorial marketing, but need inter-sectors coordination/collaboration (e.g. forest-tourism)
- Certification as a tool to provide evidences of
  - progresses towards UN Agenda 2030 SDGs
  - targets set by the new EU Policies/Strategies (e.g. Biodiversity)
- UN Decade on Forest and Land restoration → not only timber...
- Some important and emerging ES (health and human wellbeing)
  not fully explored yet → need of pilot tests
